Mini Desktop VideoKiosk

Our Mini Desktop VideoKiosk is the ultimate portable solution for the capturing and sharing of video feedback and messaging.

The VideoKiosk runs our exclusive VideoBooth software offering all the exceptional video capturing and processing features found in our free standing and wall mounted VideoKiosks.

The VideoKiosk is operated by its easy to use touch screen interface which can be completely customised to your requirements and branding. The Interface can be programmed in multiple languages, include audio prompts and data collection opportunities such as names, emails, telephone numbers alongside surveying options such as role, ethnic group, gender, age etc.

Our exclusive VideoBooth software includes a powerful admin menu which allows you to update questions, record new audio prompts, swap onscreen graphics and adjust recording settings. This allows for the quick and easy updating of your VideoKiosk for use at different events and as part of different campaigns

Video messages can be easily viewed on the VideoKiosk and exported on to any USB drive. The Video Kiosk can also automatically send video messages via email, web, mobile phone and allow users to add these to their social networking sites such as Facebook, MySpace and YouTube. Videos can also be automatically edited with pre-recorded content or have additional marketing material added prior to sending.
